

THE VALUE OF BIO- DIVERSE

AGRI- CULTURAL SYSTEMS IN OUR CITIES

Prof. Dr. Monika Egerer
Urbane Produktive Ökosysteme, TU München

Urban agriculture has a great potential to support biodiversity, improve ecosystem services like climate mitigation, and ultimately enhance the wellbeing of city residents. In this talk, I specifically explore the role of urban gardens to support biodiversity of plants and animals in cities, and a suite of ecosystem services and human wellbeing benefits across the world. I illuminate how such benefits are critical under global social and environmental change.
