

POBLENOU

SUPERBLOCK IN BARCELONA

Xavi Matilla

Chief Architect, Barcelona City Council

Sílvia Casorran

Mobility Councillor, Barcelona City Council

Poblenou superblock was the 1st one implemented in ‚Cerdà grid‘, in 2016. It started as a university pilot, with more than 100 architect students involved. After an initial loud neighbour, media and political opposition, the city council decided to keep it to explore possibilities of the new urban planning cell. The participatory process that came afterwards let the neighbours choose what they wanted for the new public space that had been won to cars: playgrounds, picnic tables, trees, sports places, vegetable garden... and step by step a new social life appeared in an area where it did not exist before. Since then Barcelona has been creating more Superblocks and now the project is scaling-up to ‚Superilla Barcelona‘.
